

AIR COMPRESSED

ACCUMULATION KIT

The air compressed accumulation kit is placed between automatic cleaning system and the compressor which furnish the air.

The tank, in painted steel, supply all the air needed to clean the burner, without this system the compressor s not able to supply enough air when the electro valve is opened during the burner ignition step. The kit is ready to be connected, with flexible hose, to the electro valve of the automatic cleaning system, and it has also a series of accessorises.

It is available in three versions according to the corresponding model burner :

ACCUMULATION	BURNER
10 litres	SPL 25-50
24 litres	SPL 65-100
50 litres	SPL 200-350

LEGEND

- 1 -vertical accumulation tank (P.max 11 bar)
- 2 - homologated security valve (rated 6 bar)
- 3 - pressostat 0-12 bar
- 4 - Interception valve
- 5 - one way valve
- 6 - joined flexible hose
- 7 - unloaded valve
