

## AUTOMATIC CLEANING KIT

This kit is used when a burner automatic cleaning system is needed. It keeps clean the gasification zone without any changes in air/fuel relation.

The system is totally automatic and controlled by the microprocessor inside the electrical card for burner control.

It is composed by an air compressed distributor inside the burner, a double outing electric valve for air compressed interception controlled by electrical card; there is the possibility to aliment the air from left or right according to the boiler door opening direction.

### **TECHNICAL DATA**

Electrical supply tension :	230 V - 50 Hz
Electrical power:	5 W
Max working pressure:	3 bar
